FREE CODE CAMP - FRONT END CERTIFICATION - **2017**

ST. JOHN'S UNIVERSITY - **2011-2015** - *Studied Biology in the Accelerated Masters Program & Finance with a minor in Social Justice*

RECENT WEB DEVELOPMENT PROJECTS

GET ME- THE NEWEST WAY TO SHARE INFORMATION - <https://github.com/V-School-SLC-January/A-Team>

A full stack application that allows users to share selected information based on their preferences. Get me allows users to generate a QR code based on the information they would like to share and on scan receive someone else information. After contact is added, users can message each other privately to follow up. Feel free to share your phone number, Facebook or anything! This application was built for mobile first with the Ionic framework.

THE MOVES - THE PLACE TO FIND AND CREATE EVENTS - <https://github.com/Daniel-pak/The-Moves>

A full stack application that allows people to find events - by name and by keyword category types - as well as create them if they are signed up as a business user. As a user, you can save events, look up more information on said event through links and a small blurb, and search for the location on a map. The application uses user authentication to allow sign in and sign out, Google Maps API, and Materialize styling to bring a real application feeling.

FOODIE - THE NEXT RECIPE FINDER - https://github.com/Daniel-pak/v_school_assignments/tree/master/projects/recipe_finder Foodie is a full CRUD application that allows users to search for recipes through ingredient, category, or by hot items of the day and save these recipes to look up for later. The application uses a RESTful API through angular http requests to allow my AngularJS client to display this information in a nicely bootstrapped website.

EXPLORATION - SEEING SPACE THROUGH NASA - https://github.com/Daniel-pak/v_school_assignments/tree/master/projects/NASA_project Through requests to NASA's RESTful API, viewers can: learn from a daily article that is displayed with a picture, view our near-earth objects and it's details, see a satellite image of their location from geolocation, and see pictures from the rover - Curiosity - on Mars.
